# INFORMATION REPORT INFORMATION REPORT

- a. The jetties: On the channel leading in are lighthouses on both jetty arms. On the southeast jetty's northern end stands a lighthouse building with a balcony and a guard hut. Guards are permanently on duty. At the jetty in the middle of the basin are moored small coast guard vessels.
- b. The quays: Quay newly built (see sketch #1). At the north-end against the pier lie little row boats and the like moored to anchors. On the quay's north end is a fish factory of brick construction with cold storage space. South from there is a wood and barbed wired area with a gate about four meters broad. (see sketch # 1) At the south end are minesweepers moored by the stern. No railway tracks on the quay. In the south end are workshops. In the southeastern innerharbor is a silted up beach with rubbish.
- c. Radar: About 400 meters from the south-east jetty land-abutment lies, relatively high, a yellow building. On the roof of this building was observed a harbor radar similar to the Neptune type. The antenna was not noticeably large.
- d. Buildings: Above the fence (planket), up on the height, lay the house. (see sketch # 2). On the roof was a glass gallery. Above the gallery was a signalmast and six searchlights. Three searchlights were turned in toward the harbor and three towards the land.
